PROFILE

Experienced backend engineer with 5 years of building scalable, reliable systems using Go, MySQL, and Redis. Strong at solving problems, improving performance, and working closely with teams to deliver real impact. Always learning, always aiming to build clean, efficient software that supports business goals.

EMPLOYMENT HISTORY

Aug 2025 — Dec 2025

Software Engineer Contractor, Axon

Project: RIPA Stop Form

- Building a RIPA Stop Form system for law enforcement, enabling structured data capture, validation and verification (V&V), batch submissions to the State Department Of Justice, analytics support, and secure data retention after submission.

Tech stack: Go, Typescript, C#, MySQL

Responsibilities:

- Implemented form structure and rule-based validation.
- Designed secure data storage and retention mechanisms aligned with regulatory policies.
- Enhanced desktop and mobile app UI/UX to support RIPA form.
- Wrote unit test and end-to-end test.
- Worked cross-functionally with product, QA and design teams.
- Contributed to workflows through standups, planning, and code reviews.

Jun 2024 — Jun 2025

Backend Developer, Smilegate Vietnam

Project: StoveLink

- StoveLink is a **PC-to-mobile game streaming platform** that allows users to seamlessly stream and play PC games on their mobile devices, offering low-latency performance and cloud-native scalability.

Tech stack: Go, Java, Mux, MySQL, Redis, AWS, OCI, C, Java, Spring Boot, MongoDB

Responsibilities:

- Built and maintained core backend services in Go with a focus on performance and scalability.
- Designed custom load balancing and a fault-tolerant Redis Cluster for efficient, low-latency data access.
- Integrated gRPC for fast microservice communication.
- Enhanced forked open-source tools (coturn for TURN/STUN, Prometheus C client for observability).
- Developed Spring Boot services for gameplay notifications and dynamic game list management.
- Implemented real-time game remote control from mobile to PC.
- Collaborated with SDK, QA, and DevOps teams to ensure stable releases.
- Contributed to agile workflows through standups, planning, and code reviews.

Aug 2021 — Jun 2024

Software Engineer, Data Nest

Project: Scoring and Lead Generator

Tech stack: Go, gRPC, MySQL, Redis, Click House, Kafka, Docker

Responsibilities:

- Built SMS anti-spam filters with Go and Redis for secure messaging.

- Developed SMS-based redirection/reminder services.
- Integrated with financial and telecom partners for onboarding.
- Maintained scalable microservices with clean code practices.

Project: Secure File Transfer Tool

- A web-based tool that allows users to encrypt and decrypt files locally before uploading to or downloading from a server, enhancing data privacy and security during transfer.

Tech stack: Go, Gin, NextJS, HDFS

Responsibilities:

- Designed and implemented the backend API for file encryption/decryption and handling file uploads.
- Built the frontend interface for users to select files and perform secure operations.
- Integrated encryption logic and client-server file handling.

Project: TinVay

- A platform that collects customer loan applications, enriches them with additional data from integrated services (e.g., scoring, identity verification), and forwards the completed profiles to banks and financial institutions for processing and evaluation.

Tech stack: Go, Gin, PostgreSQL, Redis, Typescript

Responsibilities:

- Developed and maintained backend services responsible for processing and forwarding enriched loan data.
- Integrated external services for data enrichment and customer verification.
- Worked closely with other teams to ensure data accuracy, reliability, and performance under load.
- Developed a service to track user behavior, supporting the Tinvay analyst team, using Go and Kafka.
- Participated in code reviews and contributed to architectural decisions.

Project: Finzone

- Finzone is a leading **personal finance information and connection platform** that helps users discover, compare, and access trusted financial services — including **loans, credit cards, insurance, and digital banking accounts**. It acts as a bridge between users and financial institutions, offering curated content and personalized service recommendations.

Tech stack: Go, Gin, MySQL, Redis, Typescript

Responsibilities:

- Built scalable backend APIs for product listings, lead submissions, and anti-spam features.
- Developed dynamic filtering and recommendation logic to match users with relevant offers.
- Created admin/internal APIs for content and product management.
- Ensured stability through logging, error handling, monitoring, and CI/CD integration.
- Worked closely with cross-functional teams to align tech with product goals.

Devops

Responsibilities:

- Managed CI/CD with GitHub Actions.
- Migrated documentation from Slate to Hugo.
- Monitored services using Prometheus, Grafana, and Loki with code-based dashboards and alerts.

Aug 2020 — Aug 2021

Software Engineer - Devops Intern, Data Nest

Project: Scoring and Lead Generator

- Calculates creditworthiness and fraud scores for individuals using custom-built scoring models. Integrates with internal and third-party data sources (optional) for comprehensive assessments.
- Builds dynamic profiles for each user to evaluate lending potential. Profiles are tailored to financial institutions' lending criteria.

- Automatically identifies high-potential users. Sends personalized loan offer SMS messages to qualified leads.
- Upon OTP validation, customers grant consent for banks and financial institutions to access their data securely and competently.

Tech stack: Go, gRPC, MySQL, Redis, Click House, Kafka, Docker

Responsibilities:

- Maintained and improved a customer credit scoring system for financial service assessment.
- Developed and supported multiple Go-based microservices and internal tools using the Gin framework.
- Ensured code quality, scalability, and consistency across services.
- Conducted code reviews and promoted best practices within the team.

Devops

Responsibilities:

- Expanded knowledge and expertise by learning Grafana, Prometheus, Loki, Promtail, DroneCI, and GitHub Actions.
- Contributed to a repository to store all Grafana dashboard panels and alerts for backup as code, utilizing Jsonnet and Grafonnet.

EDUCATION

Sept 2018 — Sept 2022	Computer Engineering, VNU University of Engineering and Technology (VNU-UET)
	CPA: 3.29

SKILLS

MySQL	Go
Docker	PostgreSQL
Git	Redis
Python	Kafka
